Constructed wetlands are a promising wastewater treatment technology for developing countries, being particularly effective in tropical climates. Urban facilities are developed through a fragmented planning approach, where urban development and planning is disconnected from urban water systems. The first part of this volume describes general principles for developing a monitoring programme in support of sustainable urban water management.

This approach has been implemented through municipal regulations in developed countries. Depending on the effluent quality standards, the UASB reactor must be followed by another treatment technology, such as a trickling filter, or facultative and maturation ponds. It requires energy to produce extremely fine air bubbles. Ultraviolet radiation Ultraviolet UV is produced by mercury-vapour light tubes. Water Security: Managing Risks. Instead, pervious pavements are usually located over a granular base and geotextile filters are used to avoid fine sand migration into the reservoir. Urbanas and Stahre,
